- Resists acids & alkalis, moisture & salt.
- Won't break down rubbers & wiring.
- Easy to apply. Resists wash off.
- Environmentally friendly and biodegradable.
- Minimal preparation required before coating.
- International Food Grade Approval NSF: H1

APPLICATION

Easy and safe to apply using a trigger pack sprayer, garden sprayer or airgun. Where possible remove any dirt, scale or other surface coating before applying Extreme and leave overnight or longer. Applications can be recoated in 12-24 month intervals depending on the situation.

N.B Cold water blasting will not remove Prolan coating.

Prolan cleaner available to remove existing coatings.

During cooler months it can be harder to spray Extreme through a trigger sprayer. If this happens, please warm the tin in a bucket of hot water or apply using a compressed air system or brush.
